

We are constantly innovating our product range and developing useful software for partners, installers and end users. Take a look at the latest news.

GRADE 3

We protect high-risk areas that are particularly targeted by burglars. We are expanding the JABLOTRON 100⁺ ecosystem with products that feature strict **certification for Security Grade 3** (according to the EN 50131 standard). The new range is designed for standard **commercial use** (office buildings) and institutions (public offices, schools), but its greatest strength lies in protecting premises at **risk of attack by experienced intruders using sophisticated tools**.

A Grade 3 system excels where standard alarms are simply not enough – in **jewellery shops, server rooms, pharmaceutical and weapon stores, archives, post offices**, etc.

Due to uncompromising security requirements, a strict wired connection is essential – from the new JA-108K control panel right down to individual peripherals.

THERMOSTATS

Connect the alarm to the new **JABLOTRON thermostats** and help your customers instantly save on heating costs thanks to automation across the entire **JABLOTRON 100⁺** ecosystem. The thermostats integrate seamlessly with the alarm and respond to pre-set scenarios. We believe that technology should serve you every day, not just in the event of a burglary.

The **JB-111TP** and **JB-151TP** thermostats measure both temperature and humidity, while the upgraded **JB-112TP** variant also monitors **CO₂** levels and adjusts the ventilation function accordingly. These models feature a display for basic local settings. End users have full control via the **MyJABLOTRON 2** app.

The display-free **JB-111TH**, **JB-151TH** and the higher-tier **JB-112TH** model serve as sensors and are particularly suited for commercial premises. All settings are managed remotely by the administrator. Modern design, bus and wireless models, available in a choice of white or black variants. **Opt for smart heating control with JABLOTRON thermostats.**

Useful software with an emphasis on simplicity, clarity and functionality

MyJABLOTRON

A mobile application that allows every end user to **easily and securely control** their JABLOTRON security system directly **from their phone**.

MyCOMPANY

The **MyCOMPANY** web and mobile application, which allows you to install, service and manage JABLOTRON security systems.

In **MyCOMPANY**, you will find a centralised **overview of data from all installations** – system status, faults, peripheral and camera management, and much more.

JABLOTRON 100⁺ system parameters

up to 15 sections	up to 600 users	up to 230 peripherals	up to 128 PG outputs
--------------------------------	------------------------------	------------------------------------	-----------------------------------

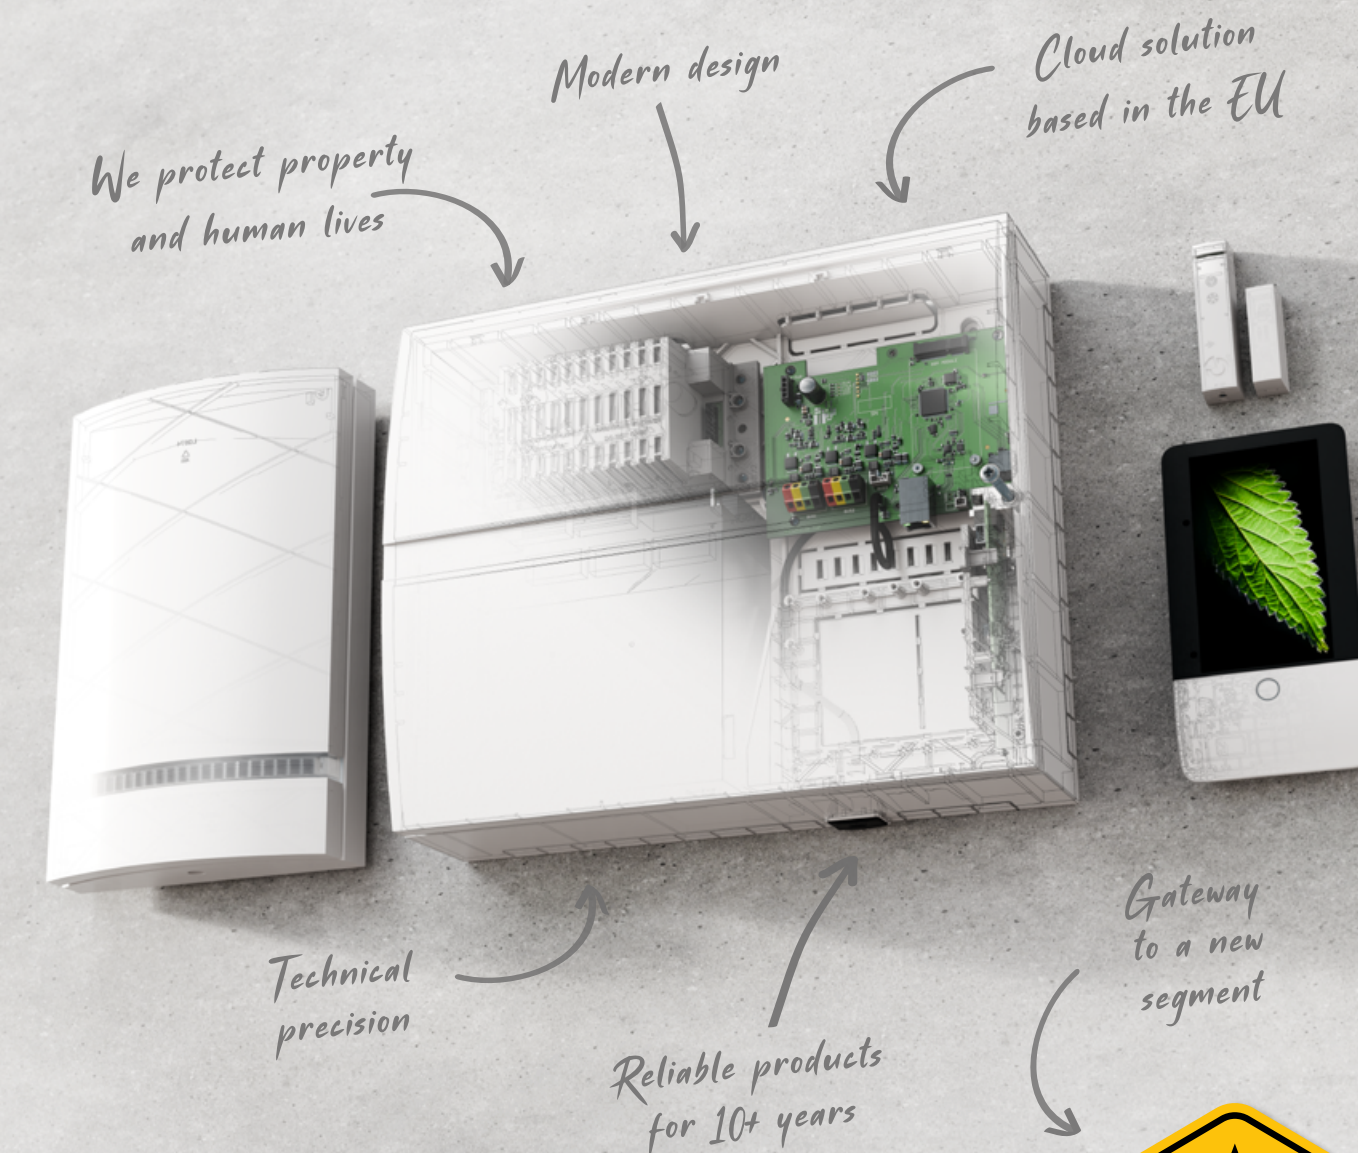

Selected products meet the requirements of **Security Grade 2 or 3**. Product maps contain a selection of key system components. The complete portfolio and detailed technical specifications can be found at <https://portal.jablotron.com/en>.
