### 3.10 Dome Communication

To prevent damage, each dome camera must have a unique address (ID).  
The factory default setting is 1.

```

                                DOME COMMUNICATION
                                $
DOME ID       : 0001
PROTOCOL      : AUTO
BAUDRATE      : 9600
PARITY        : NONE
TERMINATION   : OFF
SAVE AND EXIT(ESC TO CANCEL)

```

- DOM ID**                                    1 ~ 3999
- PROTOCOL**                                AUTO, F2/F2E, PELCO-PD
- BAUDRATE**                                2400, 4800, 9600, 19200, 38400 bps
- PARITY**                                    NONE, EVEN, ODD
- TERMINATION (RS-485)**                    OFF, ON

The device which is connected at end of line, whether it is a dome camera or keyboard, must have the cable for communication terminated by setting the appropriate DIP switch. Without proper termination, there is potential for control signal errors. Total length of the cable for communication should not exceed 4000 ft (1.2 km).

### 3.11 Alarm

```

                ALARM SETUP
                (CTRL KEY)

```

- NO (Number)** Alarm input number
- PRI (Priority)** The lower number has higher priority. (0 ~ 4)
- FUN (Function)** Stored function number to be called by alarm.
- IN (Input)** NO/NC – normally open/closed, OFF – ignore
- OUT (Output)** OUT1 ~ OUT2 – 5VTTL output, OFF – no output
- HOLD** Alarm will be held for programmed time. (03 to 99 seconds)
- LATCH** ON – Alarm message will remain on the screen even though alarm input is deactivated.  
OFF – Alarm message will disappear from the screen after programmed hold time when alarm input is deactivated.
- DWELL** Means the dwell time during multiple alarms, 03 to 99 seconds.

```

                ALARM OUT SETUP

OUT1  : ALARM
OUT2  : 1 MIN
EXIT(ESC TO EXIT)

```

**ALARM:** Alarm output is operated during an alarm operation or by the short key of the keyboard.

**1 ~ 5 MIN (minute):** Alarm output is operated during this setting time only by the function run of the dome menu or the short key of the keyboard.

**NOTE: This 1 ~ 5 MIN setting is not operated by an alarm.**

There are 5 levels of priority. The function can be selected by Preset, Auto scan, Pattern or Tour and “0” is the highest priority. Lower priority alarms won’t be serviced until the higher priority alarm is completed. Equal priority alarms will be serviced repeatedly with the dwell time.

## 3.12 Dome Setup

### • HOME FUNCTION SETUP

<b>FUNCTION</b>	NONE, TOUR, PATTERN, AUTO SCAN, PRESET
<b>NUMBER</b>	---
<b>WAITING TIME</b>	10 ~ 240 seconds
<b>ENABLE</b>	ON, OFF

The Home Function can be set so that the camera automatically goes to Tour, Pattern, Auto Scan or Preset after the keyboard or DVR has been idle for a specified amount of time.

For example, if the controller is idle for 120 seconds, the camera goes to Preset 1.

Follow these steps to program the Home position:

1. Select “**FUNCTION**” by pressing the **Right** or **Left** key to scroll through the None, Tour, Pattern, Auto Scan or Preset functions.
2. Select “**NUMBER**” and press the **Right** or **Left** key. The recorded function number will scroll.
3. Select “**WAITING TIME**” and press the **Right** or **Left** key to select from 10 to 240 seconds.
4. Select “**ENABLE**” and turn to ON or OFF by pressing the **Right** or **Left** key.

## • VIEW ANGLE SETUP

**FLIP** OFF, AUTO, 90°, 100°, 110°, 120°

**OFF:** The dome camera moves until 90° vertically.

**AUTO:** When the camera reaches the floor directly above the moving object, it will stop.

At that time, release the controller instantly and pull it down again to run the auto-flip function. When you use the panning range, it is recommended to use the flip mode to AUTO.

**90°, 100°, 110°, 120°:** Allows the image to flip digitally when the camera moves over the setting angle vertically.

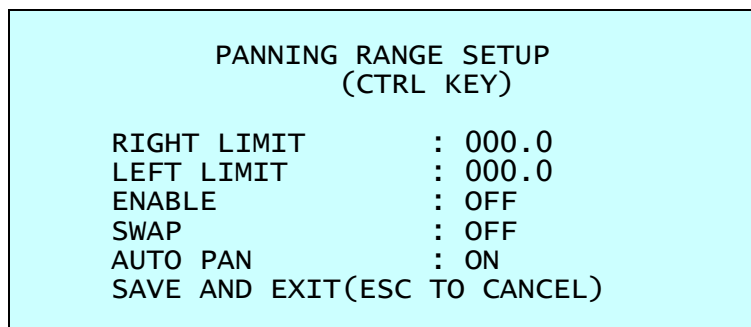

**TILT ANGLE LIMIT** -10° ~ 10°

This option is designed to limit the view angle as there is some obstruction in zooming out on specific areas of the tilt angle.

**NOTE:** Focus issues may occur in certain conditions.

## PANNING RANGE

When the dome camera is installed near a wall, panning range can be limited by user.

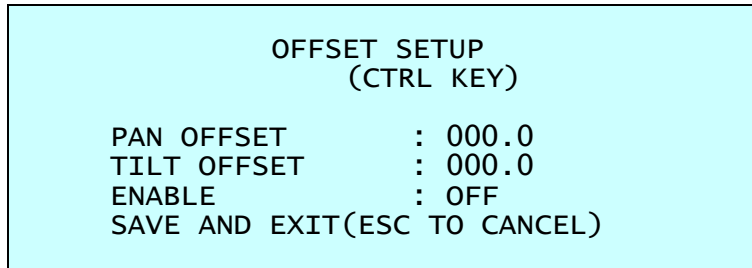

1. Place the dome camera under 90 degree vertically.
2. Set "**RIGHT LIMIT**" by pressing the **Right** key.
3. Set "**LEFT LIMIT**" by pressing the **Left** key.
4. Set "**ENABLE**" to ON to use.

To exchange the right and the left limit, set "**SWAP**" to ON.

To apply limits on the auto pan (endless panning), set "**AUTO PAN**" to ON.

**NOTE:** When the flip mode is 90°, 100°, 110° or 120° and you moves over 90° vertically, the panning range operates in opposite side.

- **ORIGIN OFFSET**

This feature is useful to align a new dome camera exactly the same as the previously installed dome camera.

Dome camera's origin set and all data initialize option do not override offset values. Only the default set option in this menu will set the offset value to zero. This can be used to avoid ceiling obstructions.

- **FACTORY DEFAULT**

Select "**FACTORY DEFAULT**" to initialize the data.

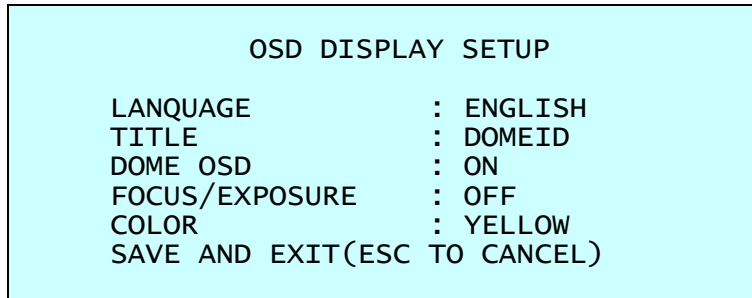

- **DOMES RESET**

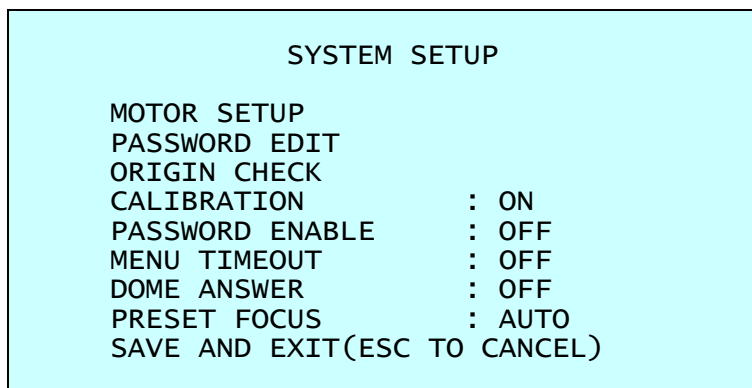

This feature is used to re-calibrate the orientation of a selected dome camera. Origin offset value is not affected by this function. (Offset is still valid after origin set.)

• **OSD DISPLAY**

- LANGUAGE**                    Select the desired language.
- TITLE**                        up to 6 characters
- DOME OSD**                    ON, POSITION, ON(ZOOM), ZOOM, TILTE&ID, OFF  
All display or title will disappear when DOME OSD DISPLAY is set to OFF.
- FOCUS/EXPOSURE**            ON, OFF  
ON: FOCUS and EXPOSURE displays. (AF AE)
- COLOR**                        YELLOW, GREEN, BLUE

• **SYSTEM SETUP**

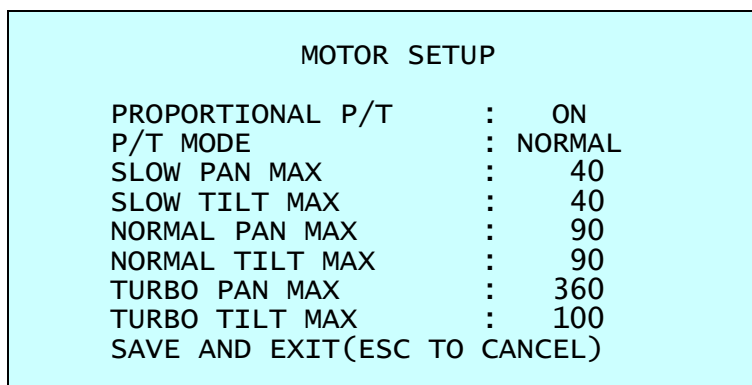

- CALIBRATION**                ON (Auto origin check), OFF
- PASSWORD ENABLE**        ON (requires the password to enter menu), OFF
- MENU TIMEOUT**            ON (5 minutes), OFF (always menu display)
- DOME ANSWER**            ON, OFF (no acknowledge command from the dome)  
This option is helpful to escape the collision of the command using some DVR.
- PRESET FOCUS**            AUTO, MANUAL, ONE PUSH  
This option set the default mode of the focus when you save the Preset.

## MOTOR SETUP

Motor Setup menu provides the pan and tilt speed of a camera. User can set the desired speed with pressing the **Right** or **Left** key.

### PROPOTIONAL P/T

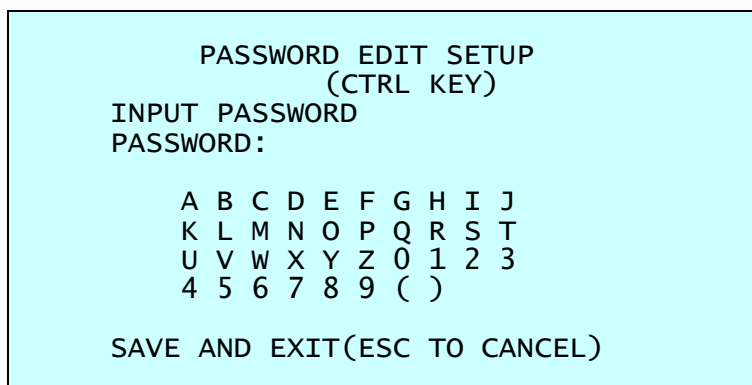

ON, OFF

### P/T MODE

SLOW, NORMAL, TURBO

SLOW PAN Maximum speed	19° ~ 90°/second
SLOW TILT Maximum speed	19° ~ 90°/second
NORMAL PAN Maximum speed	40° ~ 360°/second
NORMAL TILT Maximum speed	40° ~ 200°/second
TURBO PAN Maximum speed	200° ~ 380°/second
TURBO TILT Maximum speed	90° ~ 300°/second

## PASSWORD EDIT

You can change the password with 6-digit character in this menu.

The default password is **555555**.

When the password enable is on, the input password window displays to enter the menu. At this time, move the cursor to the desired character with the controller and press the **IRIS** **Open** key.

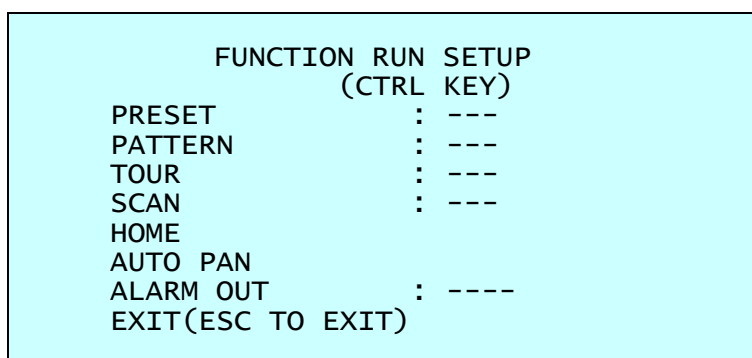

## ORIGIN CHECK

If you find the dome camera in the wrong position during operation, execute this origin check and the dome camera will return to the right position after the origin check operation.

## • FUNCTION RUN

This Function Run menu allows you to execute the function when you use the keyboard or DVR without the function keys (Preset, Pattern, Tour and Scan).

1. Select the desired Function by pressing the **Up** or **Down** key.
2. Select the number by pressing the **Tele** or **Wide** key in PRESET, PATTERN, TOUR and SCAN.
3. Press the **IRIS Open** key to execute.

**NOTE: To execute the function, you should save the function (PRESET, PATTERN, TOUR and SCAN) first.**

### - HOME

Select "HOME" and press the **IRIS Open** key. The dome camera goes to the default position that it returns to after an assigned period of inactivity passes. The default position may be a Preset, Tour, Pattern or no action.

### - AUTO PAN

You can execute the endless auto pan to turn in one direction continuously by selecting Auto-Pan.

### - ALARM OUT

This function can operate only when the alarm out setup has the time in the alarm menu.

Ex)

```
ALARM OUT SETUP

OUT1  : ALARM
OUT2  : 1 MIN
EXIT(ESC TO EXIT)
```

You press the **IRIS Open** key then that alarm out operates during the setting time only.

#### • SYSTEM INFORMATION

```

## Appendix B — Troubleshooting

If problems occur, verify the installation of the camera with the instructions in this manual and with other operating equipment. Isolate the problem to the specific piece of equipment in the system and refer to the equipment manual for further information.

Problem	Possible Solution
No video.	Verify that power is connected to all pieces of equipment in the system. Verify that the power switches are in the ON position. Check the video connections.
Poor video quality.	Check that the BNC connectors are inserted properly. Check the voltage level of the dome camera. Cable for video is shielded.
Dome cameras lose their positions.	Reset the cameras using the Dome configuration menus. Check that the dome cameras are inserted properly in the base. Check the voltage level of the dome camera.
